Executive Summary

We all must have heard about the power of oneness but did you ever really feel it?

We understand the power of oneness and togetherness. Our mission is to create a platform where like-minded individuals globally, can come together as ONE to utilize this forum for their own choosing. As life is a journey, not a destination, similarly we believe in a process-oriented approach, not an outcome-oriented approach. As of today you and people everywhere are invited to participate in this venture before it's take-off for soaring heights. Enjoy the growth from the beginning. This is indeed a situation of process versus outcome, where we are attempting a well-organized auction type investment raise in a process, not outcome-oriented approach.

This approach will give an equal chance to everyone to be a part of great initiative and becoming the stars of the results. Life as was meant, at the dawn of creation, was brought into being for the benefit of all. Life is meant to be shared, enjoyed, and meaningful for the individual, their family, their community, their society, and the global world at large. But why is it that there seems to be a 1% nationally and the same globally that excessively enjoys life or a facsimile of it. Life is not about resting on a bed of roses. It has the other side with the pain of loss, loneliness, failure, and rejection. But what if all these bad sides could easily pass on or could convert in the peaceful rainbow.

So, what makes life worth living: While there may be more to life than happiness, there may also be more to “happiness” than pleasure alone. Meaningful life and a happy life often go hand-in-hand. This is what the SafeHuman believes in the living it.

The real strength and the interests of all people across the globe lie in togetherness and oneness. You cannot win alone except as a team only. Across the globe, we are one human race. We may be coming from diverse cultures and geographical zones but that only is the richness, beauty, and gracefulness of life. This way only the life moves forward meaningfully.

It's a place where all like-minded people are free to participate in new, transformative and alternate coin, token and currency platforms that enable them to achieve their desired value.

We're going to have to be proactive and ready because unity won't happen by accident. So how about taking the first step together with SafeHuman, Bridge the world together.

We believe in “One for all, all for one”. SafeHuman is a platform to trade, commerce and for financial and investment speculating. We are a group of entities networked for better global living.

Big highlights of SafeHuman;

- Similar minds at one place; One for all, all for one
- Futuristic to attract all possible industries at one platform; SafeHuman
- Transparent, affordable and social place to raise from the beginning
- Network effect; You grow, others grow, collectively we grow

We invite you all to have a close look at the detailed information about SafeHuman. It's a place for each of you. Come and join us to know how SafeHuman can help you in raising your business at its highest peak within a very cost effective way.

Introduction

SafeHuman is the holding company based in Australia with subsidiaries being established in Singapore, Shanghai, Estonia, Switzerland and the Cayman Islands. SafeHuman is seeking to become a paragon in the decentralized structure of Blockchain and Cryptocurrency and are creating a forum Where like-minded individuals globally, can come together as ONE (SafeHuman) to utilize this forum for their own choosing.

We are a business and in spite of such, cannot and will not, let our core purpose of being, be profit at all costs. However, a responsibility to society and our fellow man is one of our unequivocal, unshakable foundational core tenets. So all investments will look to capitalize not only on profit or returns but also on the impact on the lives we changed. Whether we are emulated on this course or go it alone; this will un-debatably create a “new normal” archetype for doing business. It will be the SafeHuman Holdings, family way!

In this new age of dynamism, we embrace change and innovation, not speculation. With that, we will foster in an effort of global entrenchment to the point of being so ubiquitous that forever mars ancient lines of differences. Everywhere we establish a presence and by melding and becoming one, this problem is our problem and therefore demands a collective collaborative effort from all our group of companies.

The market for global cryptocurrency is over \$260 Billion USD today and with our entry and add value, growth can be exponential.

Our perspective is by eradicating poverty or mitigating it's causes and effects as much as possible; not through piecemeal programs but through radical, long-term, viable and a continuous sustainable increase to overall standards of living for all people.

1. The SafeHuman Ecosystem

I. SafeHuman Token

SafeHuman (\$SafeHuman) is a BEP20 token issued on the Binance Smart Chain with a total fixed supply of 1 Trillion (10¹²) tokens. The ideation of SafeHuman as a token with charitable purposes entered a pre-sale campaign which was hosted by DxSale, a decentralized, cross chain, token management platform as a service. Further to this, SafeHuman's initial token liquidity pool has been locked under DxSale's DeFi Launch Certified Liquidity Locker, ensuring safety and security for our community

II. PancakeSwap

PancakeSwap is a Binance Smart Chain- based Decentralized Exchange (DEX) for swapping BEP-20 tokens. To facilitate SafeHuman's initial public offering, PancakeSwap offers our community the ability to exchange their BNB for SafeHuman. In line with a pragmatic approach, SafeHuman shall be listed into major exchanges in the near future.

III. Binance Smart Chain

The Binance Smart Chain (BSC) is a blockchain network that runs in parallel to the Binance Chain. In contrast to the Binance Chain, BSC features smart contract functionality and compatibility with the Ethereum Virtual Machine (EVM). The Binance Smart Chain offers our community the added interoperability of facilitating their transactions through Ethereum-Based wallets, such as MetaMask. An added advantage of issuing SafeHuman tokens on the BSC is that it offers our community an affordable blockchain experience through smaller transaction fees compared to the Ethereum Network.

IV. Gnosis Safe Multisignatur

As an added security feature for the token/liquidity pool of SafeHuman, the Gnosis Safe Multisignatur platform will be implemented. The Gnosis Safe Multisignatur is a smart contract wallet that requires a minimum number of people to approve a transaction before it can occur (M-of-N)

2. Tokenomics

A 5% transaction fee reward of 3% will go in a liquidity-pool to increase token price, 1% for marketing and 1% for reaming will be distributed to holders. Holders don't need to do anything other than hold their tokens in order to earn rewards.

Total Supply at Launch
100,000,000,000

Pre-Sale Allocation
80,000,000,000

I. Earn

SafeHuman imposes automatically a fee of 5% for all transactions with SafeHuman tokens.

The token holders may not claim the fees or any specific use of these fees from SafeHuman or any SafeHuman Project team members, nor have they any legal claim against any other third-party in this regard. Half of this fee is redistributed to the community on that exchange, proportional to the tokens that they hold.

This system incentivizes our community of holders who in turn support SafeHuman to make it a sustainable movement. Further details are outlined below:

1. Half of the fee is redistributed to the community of holders, proportional to the SafeHuman tokens they hold. The fees collected are disbursed across the exchange they were collected on.
2. The other half is transferred back as liquidity provider tokens to the PancakeSwap Liquidity Pool (LP). On a weekly basis, 60% of the newly accumulated LP tokens will be removed from the liquidity pool and a majority of this will be appropriated as proceeds to our chosen charities.

For SafeHuman holders on a CEX, their tokens will be snapshotted daily, and an averaged reward will be disbursed on the 10th of every month.

What is unique about the SafeHuman ecosystem is that it universally provides a goodwill commitment to the speculative nature of cryptocurrency trading – both incoming and outgoing transactions intrinsically reflect the charitable cause of SafeHuman. For example, an outgoing transaction contributes to the liquidity pool wherein tokens are removed and appropriated as proceeds to our chosen charities.

II. Token Extraction

For the best interests of the community. The burn process has been instituted as part of an extraction process occurring every 7 days. There are cases wherein the burn process increase the floor price. In SafeHuman, burn has been integrated into a charity-burn system. The initial algorithm is as follows:

Of the newly accumulated LP Tokens (the 5% fee) over a one week cycle, 60% will be removed from the PancakeSwap Liquidity Pool: half are BNB half are SafeHuman. These token will then be appropriated to our overarching initiatives in public and transparent wallets, which will be vetted by the community as we go further.

This is our current approach to SafeHuman's tokenomics to ensure that we are capable to operate fully sustainable. Moving forward, a continuous assess mention program will be instituted the whole community will be involved in the decision-making process.

Adaptability is a key security measure that the team upholds to put SafeHuman on the best place for long-term sustainability and growth.

3. A Project To Grow With You All

SafeHuman's launch will be used to establish a new paradigm for cryptocurrency. One that allows both Members and holders of SafeHuman Tokens to receive value for their Tokens by viable growth based on inherent business performance.

Members will receive enhanced dividends for their allocations into any of the proposed business entities and projects to come. In addition to this we are providing enhanced security measures to secure Token holdings of our community at large!

4. Token Parameters

Our platform for SafeHuman is based on providing value for our members in contrast to the speculation and manipulation that is often found in other crypto markets. As such when a Member decides to invest their SafeHuman token holdings into whatever project that is being offered that member receives interest payments based on the performance on that underlying business project. We will have two types of people that buy SafeHuman:

1. People who will buy SafeHuman through the normal channels – ie. Pre-ICO and ICO webpage and exchanges for those seeking anonymity.
2. The second type of person is actually one that becomes a Member through our website and fills out the application providing their information and so forth. This person in effect fills out a KYC application allowing them to become Members and thereby able to receive member exclusives such as the burnable feature for their tokens, if they are lost or stolen allowing those lost SafeHuman Tokens once properly confirmed of their loss to be destroyed and useless to whomever took/finds them. We then reissue new tokens to that person by minting them a new set. The loss must be documented and through the blockchain ledger we can assess whether the person did indeed lose them and not just performed a transaction and trying to not pay another party or something.

5. Fund Raising Plan

Pre-ICO in order to raise funds from seed investor for marketing and budgeting concerns going forward:

- We are looking to raise a minimum of \$150,000 and a maximum of \$500,000
- To assist with the financing of development of token contracts, marketing efforts domestically and internationally across multiple channels, on boarding of key staffing positions.
- Investment package can be inclusive of 4:1 ration of SafeHuman Tokens for a \$150,000 investment and up to 6:1 for higher amounts with the possibility to redeem up to 25% of SafeHuman Tokens during ICO to be held in August to early October, 2021 and/or be convertible e q u i t y .

Token Sale Proceeds

Token Distribution

6. Rewards Program

Rewards programs are an excellent way to foster customer loyalty and incentivize future sales. They provide various rewards for customers who make any purchase using cryptocurrency. For instance, 15% percent on each cryptocurrency purchase. Rewards programs also allow you to partner with non-competing businesses that appeal to the equivalent target demographic as you are doing thus stimulating mutual.

7. SafeHuman Charity

I. Global Poverty, Clean Water And Hunger

Distributed Ledger Technology generally has amazing potential to empower social impact programs around the globe. Reduced transaction and administrative costs insure that the beneficiaries realize the utmost impact of donations and eliminate corruption and waste.

The United Nations World Food Program (WFP) estimates that 50% of the benefits they deliver are going to be cash-based transfers by the year 2021. Utilizing SafeHuman blockchain technology, transaction costs will decrease from 3.5% to less than 1% saving millions of dollars that can be used to help many more needy people.

8. Motivation And Power Of Being

I. A Universal Currency

There are compelling reasons for having a universal currency. They can be summarized as follows:

II. Standardization Leads To Simplification

Having one currency makes it considerably easier for the economies of various countries to interconnect. Trading is often made faster and without complex procedures and complications of international trading dynamics. Additionally, it takes away the issues caused by currency exchange volatility and brings about the age of superfast international money transfers.

III. Trading Can Become Faster And Economic

With a universal currency, foreign currency conversions are eliminated, which suggests not only an easier process but also a generally lower cost of trading. Exchange trading costs and hedging are taken out of the image. The necessity for financial translation will remain, though, because the adoption of one currency for all doesn't eliminate the necessity for translations in financial statements or records which will need to be examined by businessmen and governments who speak different languages.

IV. It Will Be Difficult To Interact In Price Manipulation

SafeHuman for a true global currency. This SafeHuman Token event will be the “seed” of token/coins that are backed by the SafeHuman Token. It is a currency that's meant to be accepted everywhere. It would be the result of agreements among the different governments of the world to use one system of money. The idea of a universal currency is boosted by the perceived success of the euro, something which can result in better global trade because it can become almost comparable to how local commercial transactions are undertaken.

V. The Problem Of Hyperinflation Falls

Situations almost like what's happening in Venezuela are often avoided if everyone uses a universal currency. The acute inflation situation within the South American republic happened because their currency's value depends on the local political and economic situations, two things that have clearly been on a disastrous downward spiral within the past years. A universal currency's value is fixed for all, so it's shielded from the consequences of anything that happens within the local political and economics.

A promotional graphic for SafeHuman cryptocurrency. It features the brand name 'SafeHuman' in a large, white, sans-serif font at the top left. Below it, a paragraph of text states: 'SafeHuman is a cryptocurrency that will stand above other crypto currencies. It is one of finest digital currency whose value will keep on increasing .'. Underneath this is the phrase 'USE IT WITH CONFIDENCE!' in bold, white, uppercase letters. At the bottom left, there is a row of six white icons: a gear, a stack of coins, a circular arrow with a dollar sign, a microchip, a padlock, and a pickaxe. On the right side of the graphic, there is a 3D illustration of a person in a blue suit standing on a large, glowing blue cube. The person is holding a large, glowing dollar sign. Surrounding this central figure are several smaller, glowing blue cubes and a floating screen displaying a bar chart and a dollar sign. The entire graphic is set against a dark blue background with a subtle grid pattern.

9. Investors Attraction

2018 has proven to be a remarkably difficult year for cryptocurrencies and it's going to seem there's no light at the top of the tunnel for the market. However, consistent with numerous industry experts, the last half of the year shows that cryptocurrencies can transcend just speculation, with partnerships and adoptions been on the increase.

In a tectonic swift cryptocurrency, the industry is transitioning in an era where news and speculation are still critical to interrupt a profit on one's cryptocurrency investment. Taking into consideration the rapid involvement of institutional investors in crypto projects it's easily predictable that the load is going to be measured on the utility of every project, the progress of partnerships and therefore the Wide adoption which will affect the costs during 2021.

The worldwide e-commerce and payment transitioning sector are among the sectors which we expect to note this rapid climb with a lite forecast expecting the increase of revenues from e-commerce and mobile payment from \$528.2 billion to \$885.4 billion. Small and Medium Enterprises wisely considering to catch this wave and begin accepting crypto as payment methods that may serve the new age of clients.

Cryptocurrency Exchange listing fees for Cryptocurrency Tokens, and providing the needed infrastructure to be ready to liaise with our global affiliates and representatives is why we are launching this funding round to secure \$65,000,000 to \$150,000,000 USD.

10. Global Exchange Platform

We will take the steps necessary to ensure a truly global market for everyone's goods using our global exchange platform to facilitate and monitor transactions. To create a platform for trade, commerce, cyber gaming, and for financial and investment.

11. Lock-in Period

Following the initial coin offering, there will be a “lock-in” period that affords participants many advantageous benefits. At purchase, buyers of our token who elect so will automatically receive 1.10 for every token purchased at the par value of \$1 USD. What this does is allow buyers to become long-term investors in our offering mitigating wild swings at the onset before we have an opportunity to put into effect some of our projects. During this lock-in period, all buyers who elect at purchase to do so will receive a quarterly quasi- dividend structure that provides for a 4% additional simple allocation of tokens to their original token balance.

Once there are three projects in place and operational, lock-in token holders will be invited to choose the three strategic programs implemented to invest in all or any combination thereof. At this point, your token becomes a vehicle of investment whereby in addition to the aforementioned quasi-dividend structure a token holder will get additional inducement based on the performance of the underlying project.

13. SafeWallet App

Multiswap is the local trade and connection created into safe wallet, making it simple for everybody to purchase, sell and connect tokens inside their wallet, Almost 100% of tradings amount is collected from SafeWallet's built in system will be transferred to SafeWallet token shareholders

Solving key issues with Multi-chain launches

All blockchain are made of different proportions and the solution that are required to solve liquidity sniping, liquidity locking and front running are maybe does not exist or maybe they are handled incompletely in various ways on various chains by different persons.

To make it work simply SafeWallet offers a group of solutions that are same on all the chains, this way the projects can be run on any chain with same variables under control on the same time.

Now don't need to snip on single chain and connect and dump it in other chain. Whenever a project lock the liquidity there will be no uncertainty.

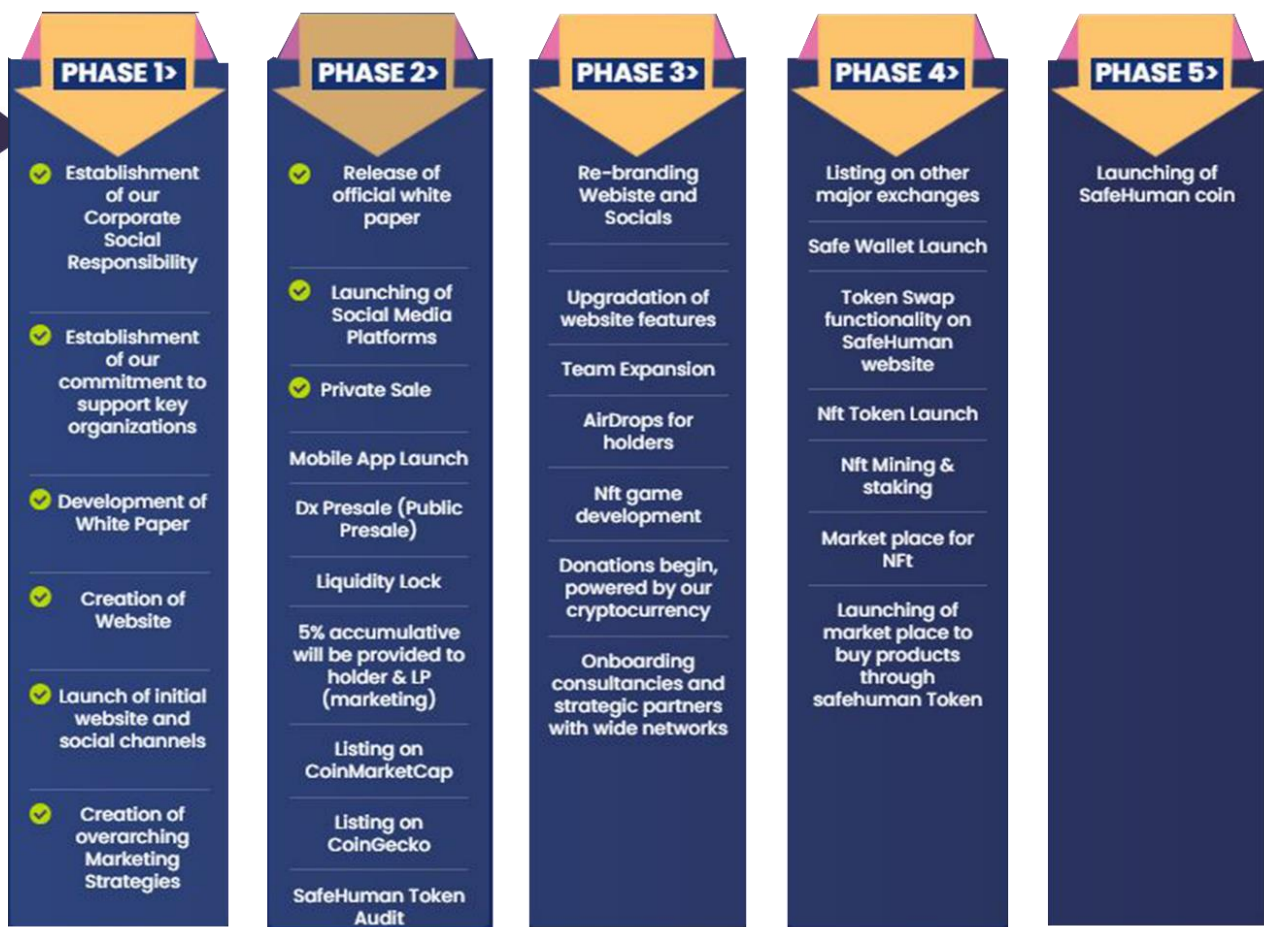

When the front running bot's volume is decreased the normal trader will have more chances to take part in project's launch with a low chance of slippage and less amount of loss.

Multiswap is the next step in our environmental system which will make a change by bringing all networks together, and at the same time it will launch and project under one rooftop system to make sure that launches are protected and successful on all networks.

The use of crypto-currencies has gained prominence, and they've been universally recognized as a legal form of payment.

14. Roadmap

15. Team

We have built a team full of highly motivated professionals who are ready to help our customers.
